### **Super Science Teacher**

You may not describe yourself as 'super science-y' but you want to bring meaningful, hands-on experiences into your classroom. Engaging students in good science doesn't need to be complicated. Daryl Chichak, a STEM specialist and former Edmonton Catholic Schools science consultant, will share his expertise and passion for activity based education. Designed for division II teachers, this workshop will have you practicing learning strategies that can be applied to various science topics and grade levels.
